

Couplings

Axiflex

Joins pipes that are already anchored. Diametres up to 4200 mm are possible.

Stepped Coupling

Problem solver on any site with the ability to join pipes of different OD's and different materials.

Axilock

Two metallic anchor rings prevent two pipes from pushing apart under pressure or pulling away under end-load.

Repair Coupling

Ideal for all situations where you need to make a permanent repair under pressure. Used throughout the water, process, oil & gas and marine industries.

Axilock-FP

Same as Axilock plus internal fire sleeve and double casing. Tested to military standards for shock and fire resistance.

Repair Clamp

The budget repair coupling of choice. For emergency repairs in buildings and industrial units to avoid costly reinstatement work caused by water damage.

Plastlock

Designed and engineered to make a permanent connection between two plastic pipes.

Plastlock Adaptor

The easiest way to join plastic pipes to metallic pipes and acting as a transition piece between the two materials.

two pipes
two screws
two minutes
